

Deploying and Managing Integrations across private and third-party clouds with App Connect Enterprise Containers

Ben Thompson

William Woodhead

IBM App Connect Enterprise, IBM UK Ltd.

November 2018

Session **JH**

Important Disclaimers

IBM's statements regarding its plans, directions and intent are subject to change or withdrawal without notice at IBM's sole discretion. Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

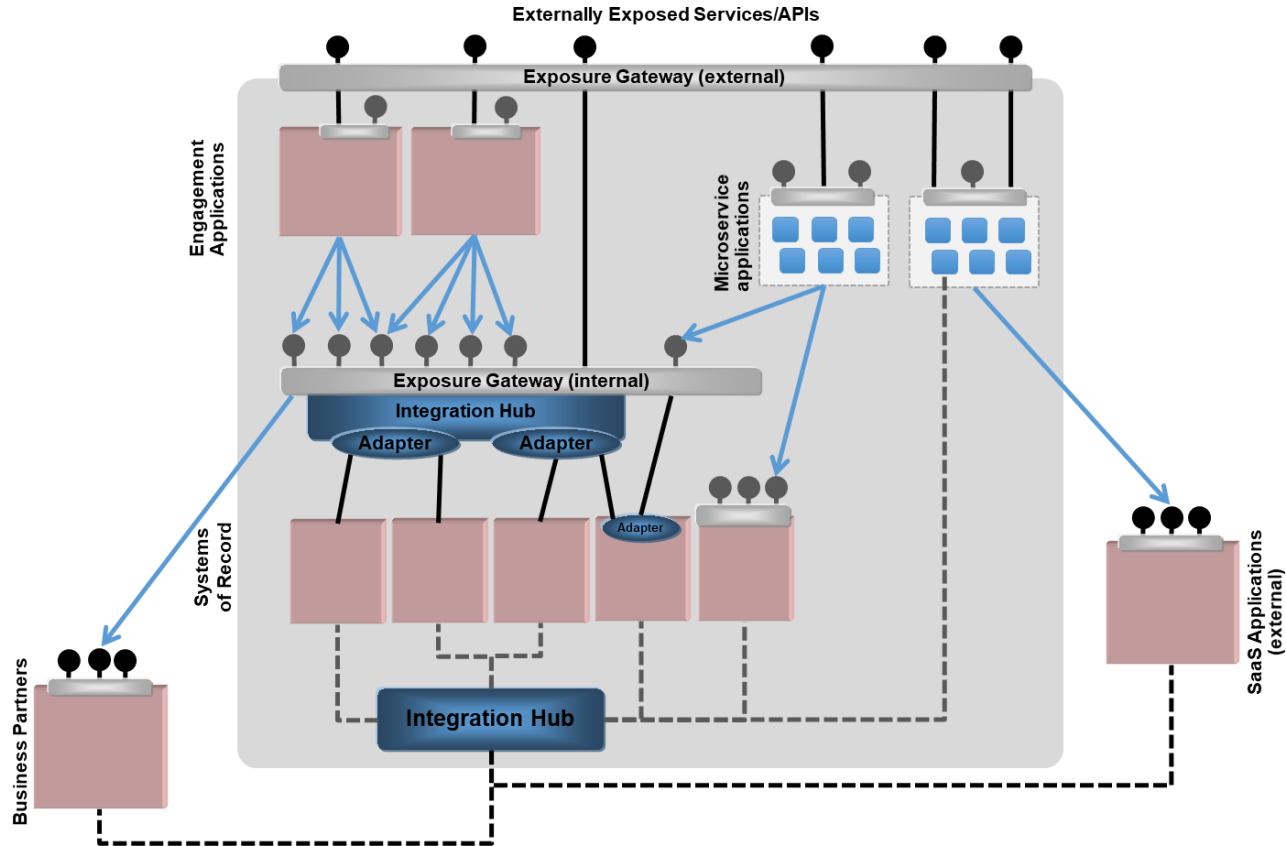

Important Disclaimers

- **IBM Confidential.** Unless specifically advised otherwise, you should assume that all the information in this presentation (whether given in writing or orally) is IBM Confidential and restrict access to this information in accordance with the confidentiality terms in place between your organization and IBM.
- **Content Authority.** The workshops, sessions and materials have been prepared by IBM or the session speakers and reflect their own views. They are provided for informational purposes only, and are neither intended to, nor shall have the effect of being, legal or other guidance or advice to any participant. While efforts were made to verify the completeness and accuracy of the information contained in this presentation, it is provided AS-IS without warranty of any kind, express or implied. IBM shall not be responsible for any damages arising out of the use of, or otherwise related to, this presentation or any other materials. Nothing contained in this presentation is intended to, nor shall have the effect of, creating any warranties or representations from IBM or its suppliers or licensors, or altering the terms and conditions of the applicable license agreement governing the use of IBM software.
- **Performance.** Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.
- **Customer Examples.** Any customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer. Nothing contained in these materials is intended to, nor shall have the effect of, stating or implying that any activities undertaken by you will result in any specific sales, revenue growth or other results.
- **Availability.** References in this presentation to IBM products, programs, or services do not imply that they will be available in all countries in which IBM operates.

Docker Image Options for ACE and MQ

Docker Image

Integration Server

Docker Image

Integration Server

MQ Client

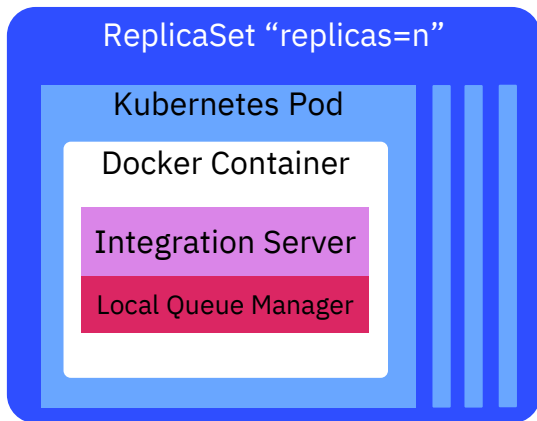

Docker Image

Integration Server

Local Queue Manager

	Integration Server	Integration Server MQ Client	Integration Server Local Queue Manager
MQ connectivity	Yes (HTTP API)	Yes (client binding)	Yes (server binding)
1PC for MQ	No	Yes	Yes
EDA nodes	No	No	Yes
2PC	No	No	Yes
Horizontally scalable	Yes	Yes	Yes (with loss of sequencing)
Persistent volume	Not required	Not required	Required (if durability desired)
Start up	Fast	Fast	Slower
Disk space	Smallest	Medium	Largest

Same ACE/MQ image ...but different configuration and usage

replicas = n
no persistent volume claim

- HA by replication (**continuous** availability)
 - **Elastic** horizontally scalability
 - **Non-durable** use of EDA nodes
 - No 2 Phase Commit

replicas = 1
persistent volume claim

- HA by reinstatement
- **Manual** horizontal scalability
- **Durable** use of EDA nodes
 - **2 Phase Commit**

**Scalable
no MQ Client**

**Scalable
with MQ Client**

**Scalable, with non-
persistent local MQ**

**Single instance with
persistent local MQ**

**Active/active with persistent
independent local MQ**

**Traditional
(with node)**

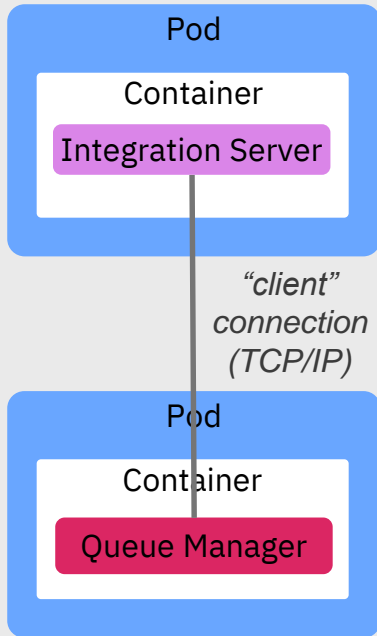

Shown
separately

Stateless	Stateless	Stateless	Stateful	Stateful	Stateful
Continuous availability	Continuous availability	Continuous availability	High Availability	Continuous Service Availability High Message Availability	Continuous Availability
Dynamic horizontal scaling	Dynamic horizontal scaling	Dynamic horizontal scaling	Vertical scaling only	Non-dynamic horizontal scaling	Non-dynamic horizontal scaling
No EDA	No EDA	Enables EDA, but note that must be replica=1 for sequencing	Enables EDA and 2PC	Enables EDA and 2PC	Enables EDA and 2PC

Cattle

Pets

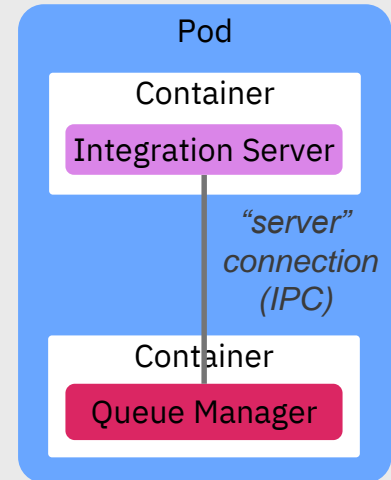

Containers and pods for ACE and MQ

- Standard ACE and MQ containers can be used
- Does not enable event nodes
- Does not enable 2PC

- Requires combined ACE/MQ image – not ideal from container design point of view. Prefer to only have one core purpose/process per container.
- Enables event nodes
- Enables 2PC (MQ, ODBC, JMS, JDBC, CICS)
- Ties topology of ACE and MQ together.

- Standard ACE and MQ images can be used
- Enables event nodes
- Enables 2PC (MQ, ODBC)
- Requires Docker 1.12 or later and Kubernetes 1.10 (alpha feature)

TCP/IP = Network based inter-communication

IPC = Inter Process Communication (via shared memory)

Installing App Connect Enterprise into IBM Cloud Private

Procedure

Complete the following steps to deploy IBM App Connect Enterprise (Advanced Edition) to IBM Cloud Private:

1. Obtain the IBM App Connect Enterprise compressed file from [IBM Passport Advantage](#).

2. Log in to your cluster from the IBM Cloud Private CLI and log in to the Docker private image registry, as shown in the following command:

```
bx pr login -a https://cluster_CA_domain:8443 --skip-ssl-validation
docker login cluster_CA_domain:8500
```

where `cluster_CA_domain` is the certificate authority (CA) domain. If you did not specify a CA domain, the default value is `mycluster.icp`.

3. Install the IBM App Connect Enterprise compressed file from Passport Advantage, by entering the following command:

```
bx pr load-ppa-archive --archive compressed_file_name [--clustername cluster_CA_domain] [--namespace namespace]
```

where `compressed_file_name` is the name of the file that you downloaded from Passport Advantage, `cluster_CA_domain` is the (CA) domain, and `namespace` is the Docker namespace that hosts the Docker image.

4. Manually sync the repositories, so that the installed chart appears in the Catalog:

- From the menu in the IBM Cloud Private dashboard, select **Manage > Helm Repositories**.
- Click **Sync repositories** and then select **OK**.
- When it has completed, the **ibm-ace-prod** chart is displayed in the Catalog.

5. You can install and configure the IBM App Connect Enterprise chart from the IBM Cloud Private Catalog, or you can use the command line to access the Helm Charts directly from <https://github.com/IBM/charts>. The following steps show how to access and install the chart by using the Catalog:

- From the menu in the IBM Cloud Private dashboard, select **Catalog > Helm Charts**.
- Select the **ibm-ace-prod** chart and then click **Configure**.
- A configuration page for your new IBM App Connect Enterprise service is displayed.

6. Configure your IBM App Connect Enterprise service, by setting values for the following properties:

- Set the **Release name** property to the name of your new service.
- Accept the license by ticking the box.
- Click **Install**.

For more information about the IBM App Connect Enterprise Helm Chart, see [ot4i/ace-helm](#).

7. You are now ready to start using IBM App Connect Enterprise.

33 && sed -i 's/PASS_MAX_DAYS\t99999/PASS_MAX_DAYS\t90/' /etc/login.defs
```

LABELs identify the built image for ICP purposes

Download ACE installation binaries and unzip them to install

Prepare syslog and set password defaults

A Quick Look at the ACE Docker file

```
34 # Copy in script files
35 COPY *.sh /usr/local/bin/
36
37 # Create a user to run as, create the ace workdir, and chmod script files
38 RUN useradd --create-home --home-dir /home/aceuser -G mqbrkrs,sudo aceuser \
39     && sed -e 's/^%sudo  .*/%sudo          ALL=NOPASSWD:ALL/g' -i /etc/sudoers \
40     && su - aceuser -c '. /opt/ibm/ace-11.0.0.0/server/bin/mqsiprofile && mqsicreateworkdir /home/aceuser/ace-server' \
41     && chmod 755 /usr/local/bin/*

43 # Set BASH_ENV to source mqsiprofile when using docker exec bash -c
44 ENV BASH_ENV=/usr/local/bin/ace_env.sh
45
46 # Expose ports
47 EXPOSE 7800 7600
48
49 USER aceuser
50
51 WORKDIR /home/aceuser
52
53 # Set entrypoint to run management script
54 CMD ["/bin/bash", "-c", "/usr/local/bin/ace_license_check.sh && IntegrationServer -w /home/aceuser/ace-server --console-log"]
```

Create a user and set up a working directory using mqsicreateworkdir

No create and deploy steps are needed ... just start up a server pointing at the work directory!

(The next generation of ...)

App Connect Enterprise on IBM Cloud Private

IBM Cloud Paks are Enterprise Ready out of the box

 <p>Ad hoc client created containers</p> <p>Client takes software binaries, Creates their own containers.</p>	 <p>IBM provided containers</p> <p>Client receives IBM Software in the form of container(s)</p>	 <p>IBM Cloud Paks on IBM Cloud Private</p> <p>Simplified, Enterprise grade, Fully supported</p>
--	---	---

IBM Software supported	Depends on product	Yes	Yes
Full stack support by IBM (Base OS, software, deployment on cloud platform)	No	No	Yes
Vulnerability Scanned (Manages image vulnerabilities)	Scan yourself	Yes	Yes
Orchestrated for Production (Built for Kubernetes by product experts)	None	None	Yes
Management and Operations	Roll your own	Roll your own	Built-in
License Metering Integration	Do it yourself	Do it yourself	Yes
Lifecycle Management	Manage it yourself	Manage it yourself	Yes
