

The Mainframe – Myths, Mastery and Money

Matt Roseblade

IBM UK

6th November 2019

Session QG

Mainframe Myths, Mastery & Money

- The mainframe in popular culture
- The power of the mainframe – and your career
- Barriers to the mainframe and why they're just myths
- Mainframer behaviours and the big secret of the mainframe
- Economics of the mainframe

The Mainframe in Popular Culture

The All-Powerful Machine?

The World Runs on Mainframes

What %age of credit card transactions?	85%
How many transactions a day?	30 billion
How many ATM transactions per year?	29 billion
How many of the top 100 banks?	92
How many of the 25 top airlines?	23
How many of the world's top 10 insurers?	10
What % age of Fortune 500 companies?	71%

And who runs the mainframes?

It's you...

And you're rare...

Why mainframe workers are essential to bridge the tech **skills gap** – [Silicon Republic](#) – 2019

Mind the Gap: How Brexit will Affect Britain's Mainframe **Skills Shortage** – [Computer Business Review](#) – 2018

Last of the mainframers: Big Iron's Big Crisis – [CIO](#) – 2018

As Baby Boomers retire, the **shortage** of mainframe professionals grows more acute – [Network World](#) – 2017

What will happen when the skills needed to maintain mainframes become **extinct**? – [Propylon](#) – 2019

The Mainframe **Skills Gap** is Widening as a Generation of Mainframers are Retiring...Perhaps Only Automation Can Save Us – [Infotel](#) – 2019

You're rare

You're special

You're doing the right thing

“Four reasons why next-gen developers should want to work on the mainframe” – ITProPortal – Oct 2019

Reason 1: It's a prestigious role

Reason 2: Innovation starts on the mainframe

Reason 3: It's varied and challenging work

Reason 4: It's an open culture

The Barriers You Face

“The mainframe is old tech!”

“We’re moving off the mainframe!”

“I need 40 years of experience!”

“It’s really, really difficult!”

“The mainframe is far too expensive!”

“The Mainframe is old tech!”

It used to be this.

It isn't now

It now looks like this

It's the same age as this

Porsche 911

4x Power increase over 50+
years

Mainframes now ~ 5 million
times the original power

It now supports these and more

Distributions	Hypervisors	Languages	Runtimes	Management	Database	Analytics
 Supported by Canonical  	  	           	     	       	       	   
<p>Community Versions</p>    	 					

DB2

And is front and centre for Hybrid cloud

~~“The Mainframe is old tech!”~~

“We’re moving off the mainframe!”

Why do this?

- Concerns about skills and costs
- Trends
- FUD

How to offload

- Replace old apps with new apps

Or...

- Convert code to run under emulators on other platforms
- Replace all mainframe functionality with new tools
- Retrain everyone
- Run two infrastructures in parallel

- Possible... But not at all easy

Successful Offload

- French retailer - claimed in 2014 to successfully moved off after “2 years effort”
 - I worked there in 2008 and they were offloading then
 - 2008 – “It’ll be finished soon”
- Took them at least 8 years.
- Their own numbers show 110,000 man days
 - 489 years of effort!
- Their own numbers show 450 people on the project
 - At least €25M spent on labour alone.
- Their mainframe was small and the annual MF spend was less than \$1M

Successful Offload

- EU shipping company – publically presented about their successful offload using a well know provider of offloading utilities
- Their own numbers do not include parallel running
- Their own numbers include ‘before’ but not ‘after’ labour costs
- Their own numbers include in a hasty resiliency add-on that alone is 60% of their old mainframe opex
- The migration overspent the budget by 48%
- The migration overran by 67%
- ROI over 5 years is -93%

What did they gain?

- Business stood still
- Big spend
- No return on investment

- Pyrrhic Victories

“We Don’t Like To Talk About It...”

- European retailer - **£300M spend** to not get off the mainframe. While they were burning cash on this, their competitors rolled out internet shopping. They still have a mainframe.
- European bank - **£50M on a failed offload**. Still on the mainframe and growing it
- European bank – **\$100M to fail to move off** IMS. Bought new mainframe hardware recently to continue to run IMS.
- European insurer – **£60M on a failed offload**. Now growing the mainframe.
- European financial services provider – **huge, undisclosed costs on a failed offload**. Now buying new mainframes

Trapped on the mainframe?

- Far from it...
- Use the Linux capabilities to consolidate other software onto the platform
 - ~90% reduction in software & environmental costs
- Modernise in situ
 - APIs & modern dev tools to open up the mainframe as an Agile environment
 - 19% savings over 5 years compared to not modernising

~~“We’re moving off the mainframe!”~~

“I need 40 years of experience!”

Nostalgia is overrated

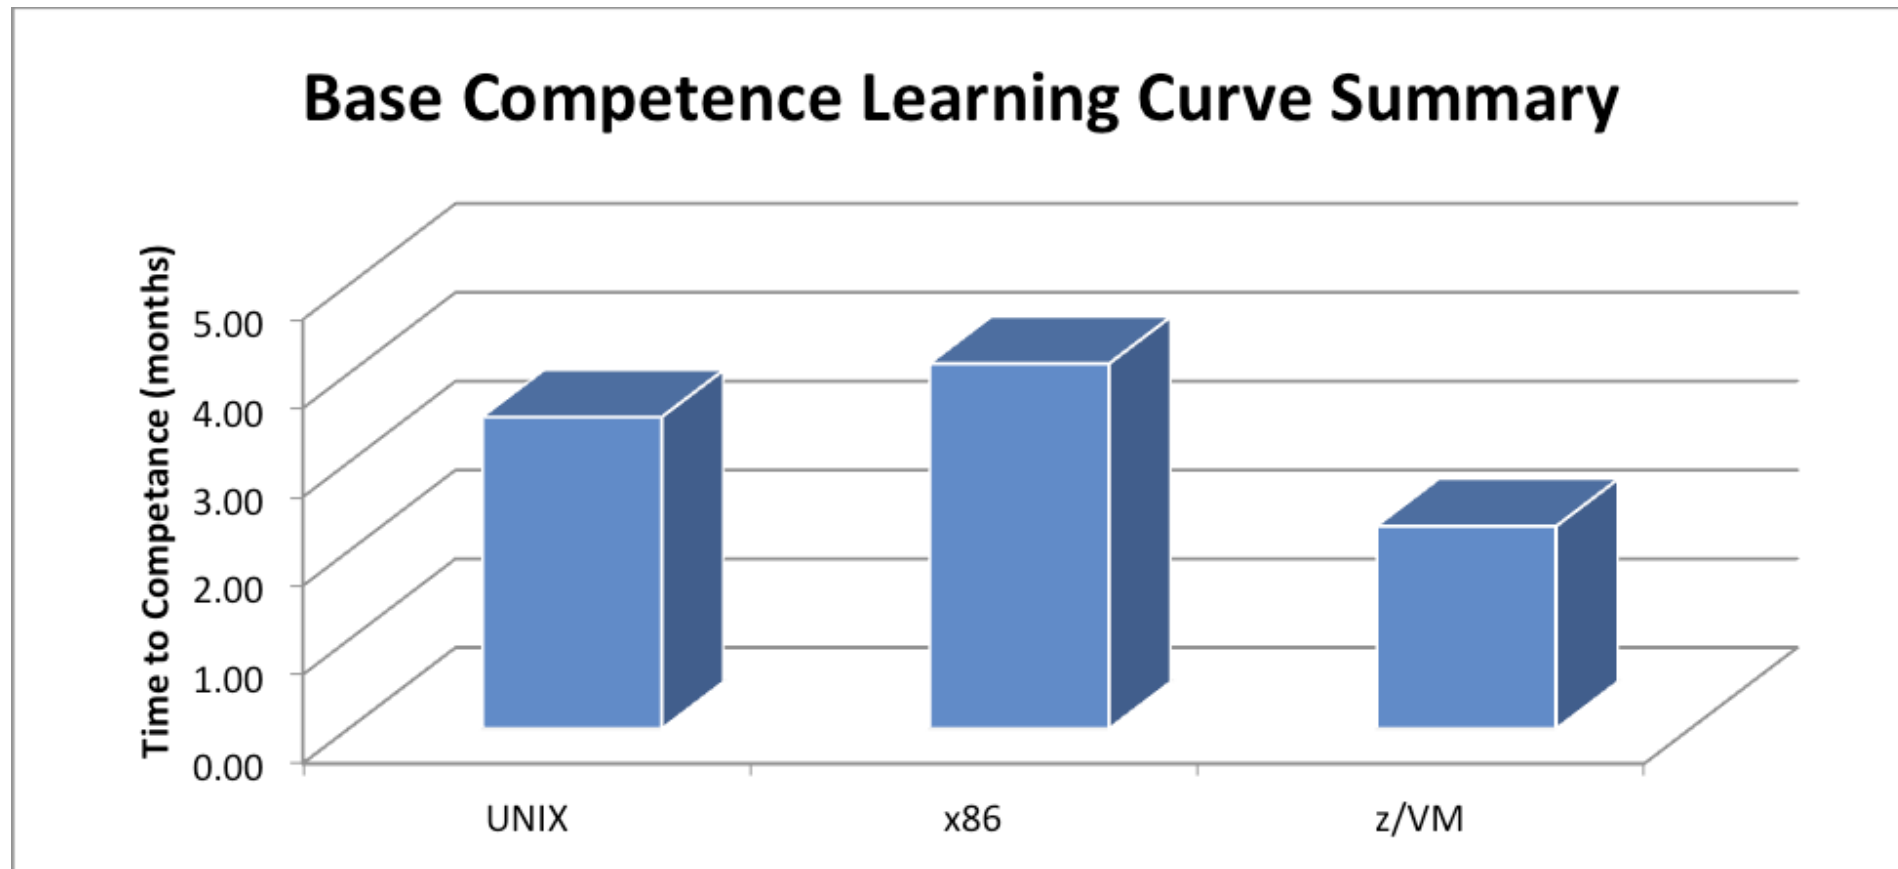

~~“I need 40 years of experience!”~~

“It’s really, really difficult!”

The Big Secrets of the Mainframe

- Logical Extrapolation is your friend
- They're not actually that difficult

- z/VM – Shortest time to competency – source [Solitaire InterGlobal Ltd - Enterprise Virtualization with z/VM](#)

The biggest
mainframe
secret...

~~“It’s really, really difficult!”~~

“The Mainframe is really expensive!”

So... How can you show that the mainframe is good value, Matt?

Get the overall
operation costs
and show how
much of that goes
on the mainframe

- Any publically-listed business will have its annual reports published on the net
- Overall operating costs and many other KPIs will be in this report
- Extract them and use them

Ask the question...

WHAT PERCENTAGE OF THE
OVERALL OPERATING COST
IS THE MAINFRAME COST?

Western European
mortgage company

Less than 1000 MIPS

Mainframe cost is...

**2.14% of annual
operational
costs**

Eastern European bank

30,000 MIPS

Mainframe cost is...

**2.25% of annual
administrative
costs**

Eurasian bank

25,000 MIPS

Mainframe cost is...

**2.2% of annual
operating costs**

UK bank

> 150,000 MIPS

Mainframe cost is...

**0.9% of 2016-17
underlying profit**

AND SO NOW WE SHOULD ASK...

HOW MUCH OF YOUR
BUSINESS RUNS ON THE
MAINFRAME?

Probably quite a lot..

Remember... We saw these earlier.

72% of customer-facing applications
have a mainframe component..

Mainframes consume only 6.2 percent of worldwide
IT spend. Yet, they run 68 percent of production
workloads

~~“The Mainframe is really expensive”~~

Myths...

“The mainframe is old tech!”

“We’re moving off the mainframe!”

“I need 40 years of experience!”

“It’s really, really difficult!”

“The mainframe is far too expensive!”

Takeaways

The mainframe underpins the world

It's modern, secure, reliable and not old tech

You don't need years of experience to be good

The mainframe is not expensive

The mainframe has a bright future

And so do you

You're in the right place...

At the right time...

Doing the right role...

With the right technology

You have a long, rewarding and enjoyable career ahead of you. Have fun.

IBM

//* IBM Z DAY
//* open | on | secure
21 NOVEMBER 2019

1-DAY VIRTUAL CONFERENCE

25 INDUSTRY SPEAKERS

LEARNING PLATFORM FOR ALL

IBM Z Day is a 1-day virtual conference for **anyone and everyone!** Our lineup of 25 global thought leaders will highlight industry trends and demonstrate how IBM Z is reliably running the world – always **open | on | secure.**

Register Today : ibm.biz/IBMZDay

Please submit your session feedback!

- Do it online at <http://conferences.gse.org.uk/2019/feedback/qg>
- This session is QG

1. What is your conference registration number?

This is the three digit number on the bottom of your delegate badge

2. Was the length of this presentation correct?

1 to 4 = "Too Short" 5 = "OK" 6-9 = "Too Long"

1 2 3 4 5 6 7 8 9

3. Did this presentation meet your requirements?

1 to 4 = "No" 5 = "OK" 6-9 = "Yes"

1 2 3 4 5 6 7 8 9

4. Was the session content what you expected?

1 to 4 = "No" 5 = "OK" 6-9 = "Yes"

1 2 3 4 5 6 7 8 9
